

## LASH LIFT AND TINT AFTERCARE

### After Care Do's & Don'ts

So now let's talk about the in's and out's of what aftercare to follow:

Lash lifting is a low maintenance service, not a NO maintenance service. It will require some time and attention from the client to maintain the results.

- 1** Do not apply make-up or receive any other eye treatments for at least 24 hours after your treatment...

**Explanation:** Any type of make-up that you would have to remove that night with water via scrubbing and rubbing or any other eye treatment that would involve heat, steam or saunas.

- 2** Avoid rubbing the eyes

**Explanation:** Rubbing the eyes can place unwanted oils, dirt, debris, and could also change the structure of the lift.

- 3** Avoid putting contact lenses back in for the rest of the day.

**Explanation:** There were cleansers and chemicals used, we want to let these fumes rest and ensure the contact lens isn't trapping in any chemical or fume which could result in irritation.

- 4** Keep lashes dry for 24 hours.

**Explanation:** Water can interfere with the reforming or curing of the bonds. It is also hard to control the amount of water the client uses. A little bit of allowance with water could mean different things to different clients, it is best to avoid all water for 24 hours.

- 5** Use a lash conditioner daily.

**Explanation:** Lash lifting is a chemical processing treatment. It is important to moisturize and condition the lash daily to ensure the lashes maintain the nutrients and moisture within the follicle!

- 6** Comb the lashes upwards using the mascara wand daily.

**Explanation:** This is similar to lash extensions. When sleeping the lashes can get pushed in different directions, therefore to maintain the look of the lash lift, comb the lashes upwards each morning upon waking.

### Note\*

Lash growth serums are amazing in the fact that, yes they work beautifully; however, lash serums can be problematic for clients who are receiving lash lifts. Lash growth serums are designed to hold the natural lashes place for longer by extending the growth phase. The longer the lashes remain connected to the blood supply in the follicle, the longer it will continue to grow. This, in turn, messes with the grow out cycle of the lash lifts, and relifting. Clients using lash growth serum will need services sooner and eyelash health may overall be affected.
