

HAIR EXTENSION CARE INSTRUCTIONS

Washing and Styling

You must follow the directions provided to you by your certified stylist and use only products approved by your certified stylist in order to prevent damage to the extensions and your own hair. We suggest our own wet hair care line.

- You have twice as much hair, so rinse twice as much
- Leave your conditioner on the extensions for at least 2-3 minutes
- As your extensions age, leave conditioner on for a longer time
- Run fingers along scalp in "Z" shape pattern and run fingers through your cylinders
- Towel dry hair as much as possible; Extensions will retain much more water than your natural hair
- Air/Rough dry at least 60% before running a brush through the hair
- **DO NOT** wash or blow dry your hair upside down as this may cause tangling.

Coloring Serious damage may be caused to your extensions and to your own hair by chemical treatments at home. This is because color or perming chemicals may be trapped in the attachment cylinders, where they can continue to affect and possibly damage the extensions or your hair. All chemical treatments should be carried out by a certified stylist. The range of color changes possible with extensions is limited by certain chemical factors understood only by your certified stylist.

Cutting

Please make sure to contact your Certified Stylist when looking for a trim.

Maintenance Program

As your hair grows, the cylinders attaching the extensions will move further away from your scalp along with your own hair. This can increase the traction on your hair. It is necessary for you to return to your certified stylist every 4 to 6 weeks, or as advised to have the attachment cylinders returned/replaced to their original positions. Failure to do this may result in tangling and/or loss of hair and also a loss in the manufacturer's guarantee on the extensions. Furthermore, it is vital you return to or contact your stylist within one week of the initial fitting of your extensions so your certified stylist can ensure that the system is satisfactory to you. This will also assist in determining suitable hair care regime at home and in the studio.

Brushing Technique

Extra care must be taken when brushing the hair to avoid dragging (pulling) the cylinder attachments.

- Hold your hair close to the base and brush from the ends working your way up the shaft of the hair.
- Recommend paddle or boar bristle brush- loop brushes not required

Swimming

When swimming it is advisable to:

- Braid or put your extensions into a ponytail as this will prevent knotting.
- Rinse your hair in fresh water before going into pool or ocean as well as rinsing once you get out
- Apply a detangler or leave-in conditioner once you get out of the water

Sleeping

We suggest sleeping on a smooth silky surface that is non-abrasive and will assist in taking care of your DreamCatchers Extensions while sleeping.

- Do not go to bed with wet hair
- Loosely braid or put your hair into a ponytail when sleeping.

If you have any other questions, please contact your certified extension stylist!
